

A background image showing four people in a professional setting, overlaid with a semi-transparent orange filter. The people are engaged in a conversation, with one woman on the left smiling and looking towards the center. A man on the right is also smiling and looking towards the center. Two other people are partially visible in the center, facing each other. The overall tone is positive and collaborative.

Innovation Program

Innovation Program

Enbridge Gaz Québec provides subsidies to help its customers reduce their natural gas consumption and greenhouse gas (GHG) emissions through energy efficiency programs. This guide is for customers who would like to receive an energy innovation subsidy. This guide outlines the required steps to follow when you apply. You are encouraged to submit your applications and supporting documents electronically.

Purpose

The subsidy for the Innovation program aims to support customers wishing to try out new approaches that will lead to improved energy efficiency for natural gas consumers. Enbridge Gaz Québec is offering subsidies of up to \$25,000 or 75% of project costs to support research and demonstration projects designed to reduce energy consumption or GHG emissions. This program also aims to explore the potential of certain measures or initiatives that could eventually be commercialized on a larger scale.

The financial assistance is divided into two equal instalments: the first one is paid when the project is approved, and the second when the project is completed.

Eligible customers

This program is for Enbridge Gaz Québec's Rate 1 commercial, institutional and industrial customers.

In the case of a new building, Enbridge Gaz Québec only pays the second instalment once the meter has been opened.

Eligibility criteria

To obtain financial assistance under the Innovation program, the following eligibility criteria must be met:

- A.** The energy efficiency measures must focus on the consumption of natural gas.
- B.** Measures focused on renewable energy must aim for a post-intervention natural gas consumption threshold equivalent to at least 30% of the volume of natural gas that would have been consumed in the absence of those renewable energies.

Innovation Program

- C.** The project must not be eligible for any other subsidy program under Enbridge Gaz Québec's global energy efficiency plan. Also, the sum total of all financial assistance provided may not exceed 75% of the total eligible costs.
- D.** The measures must be reproducible and promise energy efficiency potential.
- E.** One of the following aspects of the measure has not yet been tested in Quebec:
- energy performance;
 - profitability; or
 - applicability.
- F.** The purpose of the proposed project is to assess at least one aspect of innovation, that is to say the efficiency, profitability or commercial acceptability of the new eco-energy solution.
- G.** The applicant and its partners have the capacity to carry out the project.

At the start of the project, Enbridge Gaz Québec will determine how often progress reports are to be provided, and the applicant will have to submit those reports in accordance with the established timeline. A final report will be requested by Enbridge Gaz Québec once the project has been completed.

H. Eligible and non-eligible expenses

- salaries of the participant's staff and partners working directly on the project;
- fees for required professional services;
- costs, equipment rental, and supplies; and
- professional validation and verification service fees and costs.

The following are not eligible expenses (non exhaustive list):

- production losses, rejects or other losses due to project-related activities;
- land purchases;
- non-essential and non-justifiable project expenses, such as executive salaries, or expenses that do not represent an incremental cost for the participant; and
- any other expense not directly related to the project.

Innovation Program

Steps to follow to obtain financial assistance

- | | |
|--------|---|
| Step 1 | Consult the participant's guide |
| Step 2 | Submit your indication of interest |
| Step 3 | Submit your pre-admission application and the project details |
| Step 4 | Wait for Enbridge Gaz Québec's approval and the first financial assistance instalment |
| Step 5 | Organize the project implementation |
| Step 6 | Submit the project progress reports |
| Step 7 | Submit your final report upon completion of the project |
| Step 8 | Receive the second financial assistance instalment from Enbridge Gaz Québec |
